

The Struggle with PHP/IOP Outcomes Compliance

55% of patients without a change score are missing BOTH admission and discharge assessments

But when patients stop showing up, can the last during treatment assessment be used as a discharge assessment?

Admission Assessment

During Treatment Assessments

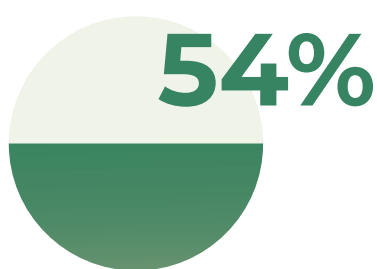

Discharge Assessment

16%

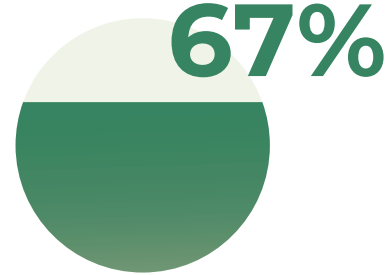

lower severity at discharge vs. last during treatment

when using the last during treatment assessment

VS.

when using a discharge assessment

Best Practices for Patient Improvement Metrics

Compliance may increase by using the last during treatment assessment as the discharge assessment, but other metrics suffer.

Improvement metrics should reflect patients who fully complete the recommended course of treatment.

Focus on BOTH admission and discharge assessment capture to improve compliance.
